In Scope

- Calorie intake tracking via manual input or an AI that can calculate calories based on a camera image.
- Track water intake by taking note of the volume of the user's water bottle and calculating water intake based on the number of refills.
- Ability to connect to smart devices like smart watches.
- Store and display a user profile consisting of user-entered public information.
- Make connections through adding other users as friends.
- Heartrate tracker compatibility with smart devices.

Out of Scope

- Exclude push notifications to encourage user discipline.
- No web application as it will mainly be a mobile application.
- Exclude tracking specific gym exercises (how many sets on what exercise, machine weight, etc.)
- No tracking for medications.
- No sleep tracker.
- No subscriptions or ads.
